CONTENTS OF VOLUME 155

NUMBER 1, MAY 15, 1986

Review. Chlorophyll: An Efficient Detector of Electronically Excited Species in Biochemical Systems <i>Cornelia Bohne, Ana Campa, Giuseppe Cilento, Lilian Nassi, and Miguel Villablanca</i>	1
Peptide Mapping of Proteins in Gel Bands after Partial Cleavage with Acidic Cyanogen Bromide Vapors <i>Surekha M. Zingde, Neelam V. Shirsat, and Balwant P. Gothoskar</i>	10
Evaluations of Tyrosine Apodecarboxylase Assays for Pyridoxal Phosphate <i>Margaret L. Fonda</i>	14
Quantitation of Proteins by Elution of Coomassie Brilliant Blue R from Stained Bands after Sodium Dodecyl Sulfate-Polyacrylamide Gel Electrophoresis <i>Eric H. Ball</i>	23
High-Performance Liquid Chromatographic Determination of Urinary Catecholamines by Pre-Column Solid-Phase Dansylation on Alumina <i>Hironori Tsuchiya, Mikio Tatsumi, Nobuhiko Takagi, Toru Koike, Hideki Yamaguchi, and Tokishi Hayashi</i>	28
Technique for Injection into the Sciatic Nerve of the Mouse for Quantitative <i>in Vivo</i> Metabolic Studies <i>Anthony M. Heape, Françoise Boiron, and Claude Cassagne</i>	34
Application of Progress Curve Analysis to <i>in Situ</i> Enzyme Kinetics Using ^1H NMR Spectroscopy <i>Jamie I. Vandenberg, Philip W. Kuchel, and Glenn F. King</i>	38
Silver Staining of Proteins: Standardized Procedure for Two-Dimensional Gels Bound to Polyester Sheets <i>Fabienne Granier and Dominique de Vienne</i>	45
A Single-Step Isolation of K99 Pili from B-44 Strain of <i>Escherichia coli</i> <i>Yashwant D. Karkhanis and Balbir S. Bhogal</i>	51
High-Performance Liquid Chromatographic Separation and Quantitation of Tetrapyrroles from Biological Materials <i>Herbert L. Bonkovsky, Sheryl G. Wood, Scott K. Howell, Peter R. Sinclair, Beth Lincoln, John F. Healey, and Jacqueline F. Sinclair</i>	56
Solid-Phase Iodination: <i>In Vitro</i> Labeling with ^{125}I of Proteins Bound to Nitrocellulose and Substituted Sepharose <i>U. Plagens and P. Traub</i>	65
Increased Sensitivity in Antigen Detection during Immunoblot Analysis Resulting from Antigen Enrichment via Immunoprecipitation <i>Mark F. Wiser and Hans-Georg Schweiger</i>	71
Cationic Heme Undecapeptide as Stain for Detecting Glycosaminoglycans on Cellulose Acetate Strips <i>Nicolae Ghinea</i>	78
Peptide and Protein Molecular Weight Determination by Electrophoresis Using a High-Molarity Tris Buffer System without Urea <i>Steven P. Fling and Dale S. Gregerson</i>	83
Immune Serum to Protein Molecular Weight Standards for Calibrating Western Blots <i>George M. Carlone, Bonnie B. Plikaytis, and Robert J. Arko</i>	89
Use of Monoclonal Antibodies to Separate the Enantiomers of Absciscic Acid <i>J. Paul Knox and Giovanni Galfre</i>	92
Preparation of Peptide-Protein Immunogens Using <i>N</i> -Succinimidyl Bromoacetate as a Heterobifunctional Crosslinking Reagent <i>Michael S. Bernatowicz and Gary R. Matsueda</i>	95

A Spectrofluorimetric Assay of Calmodulin-Dependent Protein Phosphatase Using 4-Methylumbelliferyl Phosphate	103
<i>Frank A. Anthony, Dennis L. Merat, and Wai Yiu Cheung</i>	
Enzymatic Determination of Veratryl Alcohol	108
<i>Matti S. A. Leisola, Brigitte Schmidt, and Armin Fiechter</i>	
Methodology for the Analysis of Fenbendazole and Its Metabolites in Plasma, Urine, Feces, and Tissue Homogenates	112
<i>Steven A. Barker, Lily C. Hsieh, and Charles R. Short</i>	
A Procedure for the Preparation of [^{32}P]Phosphatidic Acid	119
<i>R. Kennedy Keller, W. Lee Adair, and Nancy Cafmeyer</i>	
Disulfide Scrambling of Interleukin-2: HPLC Resolution of the Three Possible Isomers	123
<i>Jeffrey L. Browning, Robert J. Mattaliano, E. Pingchang Chow, Shu-Mei Liang, Bernard Allet, Joseph Rosa, and John E. Smart</i>	
Kinetic Study of the Reaction between Trinitrobenzenesulfonic Acid and Amino Acids with a Trinitrobenzenesulfonate Ion-Selective Electrode	129
<i>E. G. Sarantonis, E. P. Diamandis, and M. I. Karayannis</i>	
Identification of the C-Terminal Portion of a Protein by Comparative Peptide Mapping	135
<i>Toshiaki Isobe, Tohru Ichimura, and Tsuneo Okuyama</i>	
High-Performance Gel Permeation Chromatography of Proteins and Peptides on Columns of TSK-G2000-SW and TSK-G3000-SW: A Volatile Solvent Giving Separation Based on Charge and Size of Polypeptides	141
<i>G. Brent Irvine and Christopher Shaw</i>	
Direct Assay of Thymidine Kinase Bound to Ion-Exchange Paper for Dot Spotting and Enzyme Blotting Analysis	149
<i>K. J. van den Berg</i>	
Analysis of Protein Circular Dichroism Spectra for Secondary Structure Using a Simple Matrix Multiplication	155
<i>Larry A. Compton and W. Curtis Johnson, Jr.</i>	
Identification of Ester-Linked Fatty Acids of Bacterial Endotoxins by Negative Ion Fast Atom Bombardment Mass Spectrometry	168
<i>Robert C. Seid, Jr., William M. Bone, and Lawrence R. Phillips</i>	
Measurements of Serum Glucose Using the Luciferin/Luciferase System and a Liquid Scintillation Spectrometer	177
<i>Lars-Åke Idahl, Per-Erik Sandström, and Janove Sehlin</i>	
Identification of Cell Surface Glycoproteins by Periodate-Alkaline Phosphatase Hydrazide	182
<i>Zvi Keren, Gideon Berke, and Jonathan M. Gershoni</i>	
A Cycling Assay for the Determination of Mono(adenosine-5'-diphosphoribose)-Protein Bound Conjugate Levels in Mouse Tissues	188
<i>Chang He</i>	
Purification of Human Copper, Zinc Superoxide Dismutase by Copper Chelate Affinity Chromatography	193
<i>Randall J. Weselake, Sharon L. Chesney, Abram Petkau, and Albert D. Friesen</i>	
Long-Lived Enzymatic Metabolites of Thromboxane B_2 in the Human Circulation	198
<i>John A. Lawson, Carlo Patrono, Giovanni Ciabattoni, and Garret A. FitzGerald</i>	
Purification of Erythrocyte Band 4.1 and Other Cytoskeletal Components Using Hydroxyapatite-Ultrogel	206
<i>Athar Husain and Daniel Branton</i>

Introduction to Mass Spectrometry, by J. Throck Watson

Reviewed by Sanford P. Markey 212

<i>An Atlas of Immunofluorescence in Cultured Cells</i> , by Mark C. Willingham and Ira Pastan	Reviewed by John A. Hanover	212
<i>Methods in Enzymology</i> , Edited by G. DiSabato, J. J. Langone, and H. Van Vunakis	Reviewed by Gordon Guroff	213
<i>Plant Cell Culture</i> , Edited by A. Fiechter	Reviewed by Arthur Weissbach	213

NUMBER 2, JUNE 1986

Review. Partitioning in Aqueous Two-Phase Systems: An Overview	Harry Walter and Göte Johansson	215
Artificial Reductant Enhancement of the Lowry Method for Protein Determination	Eric Larson, Bruce Howlett, and Andre Jagendorf	243
A Homogeneous Assay for Biotin Based on Chemiluminescence Energy Transfer	E. Joan Williams and Anthony K. Campbell	249
Highly Sensitive Determination of Free Polyunsaturated, Long-Chain Fatty Acids in Human Serum by High-Performance Liquid Chromatography with Fluorescence Detection	Masatoshi Yamaguchi, Reiko Matsunaga, Kazuya Fukuda, Masaru Nakamura, and Yosuke Ohkura	256
A Class of Cleavable Heterobifunctional Reagents for Thiol-Directed High-Efficiency Protein Crosslinking: Synthesis and Application to the Analysis of Protein Contact Sites in Mammalian Ribosomes	Tore Hultin	262
Eosin Y: A Reversible Stain for Detecting Electrophoretically Resolved Protein	Michael E. Selsted and Heber W. Becker III	270
Combined Alcian Blue and Silver Staining of Glycosaminoglycans in Polyacrylamide Gels: Application to Electrophoretic Analysis of Molecular Weight Distribution	Hoki Min and Mary K. Cowman	275
Fast Atom Bombardment and Tandem Mass Spectrometry for Structure Determination of Steroid and Flavonoid Glycosides	Frank W. Crow, Kenneth B. Tomer, James H. Looker, and Michael L. Gross	286
An Automated Fluorescence Assay for Subnanogram Quantities of Protein in the Presence of Interfering Material	Klaus Dieter Hammer and Klaus Nagel	308
A Convenient Fluorescent Assay for Vertebrate Collagenases	Michael D. Bond, David S. Auld, and Roy R. Lobb	315
Analysis by Reverse-Phase High-Pressure Liquid Chromatography of Phenylisothiocyanate-Derivatized 1-Aminocyclopropane-1-carboxylic Acid in Apple Extracts	Danielle Lanneluc-Sanson, Chon Ton Phan, and Raymond L. Granger	322
Cross-Blot and Cross-Dot System: A High-Performance System for the Detection of Antigen-Antibody Complexes on Nitrocellulose	Monique Alric, Dominique Cheyvialle, and Michel Renaud	328
Large-Scale Procedure for the Purification of Fibronectin Domains	Laura Borsi, Patrizia Castellani, Enrica Balza, Annalisa Siri, Caterina Pellicchia, Fiorella De Scalzi, and Luciano Zardi	335
Total Cholesterol, Fatty Acids, and Plasmalogens Can Be Reliably Quantitated by Analysis on Chromarods after the Methylation Step Required for Fatty Acid Analysis by Gas-Liquid Chromatography	Bruno D. Beaumelle and Henri J. Vial	346
Different Behavior of Type I and Type I-Trimer Collagen in Neutral Sodium Chloride Solutions	C. Luparello and I. Pucci-Minafra	352

Purification to Homogeneity of the Human Skin Chymotryptic Proteinase "Chymase"	<i>Lambro A. Johnson, Kenneth E. Moon, and Mark Eisenberg</i>	358
Isolation and Analysis of Bacterial Cobamides by High-Performance Liquid Chromatography	<i>Erhard Stupperich, Iris Steiner, and Marion Rühlemann</i>	365
Enzymatic Detection of Native and Derivatized Horseradish Peroxidase in Sodium Dodecyl Sulfate Polyacrylamide Gels	<i>Marie L. Schmidt and John Q. Trojanowski</i>	371
A Method for the Preparation of Size Marker for Synthetic Oligonucleotides	<i>GuoZhong Jing, AiPing Liu, and Wai-Choi Leung</i>	376
A Vital Staining Method for Measuring the Efficiency of Transfection of Eucaryotic Cells	<i>Jos Domen, Rob W. van Leen, Nicolette H. Lubsen, and John G. G. Schoenmakers</i>	379
Direct Purification of Polyadenylated RNAs from Isolated Polysome Fractions	<i>Minoru Hirama, Akiko Takeda, and Keith J. McKune</i>	385
A Method for the Preparation of 3-Ketoacyl-CoA Derivatives	<i>Colin Thorpe</i>	391
A Radioimmune Assay of Ganglioside GM ₁ Synthase Using Cholera Toxin	<i>Koichi Honke, Naoyuki Taniguchi, and Akira Makita</i>	395
A Sensitive Spectrophotometric Assay of Pyruvate Dehydrogenase Activity	<i>Piotr W. D. Scislowski and E. Jack Davis</i>	400
AUTHOR INDEX FOR VOLUME 155		405

The Subject Index for Volume 155 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins which contain a novel aspect and in which a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what kind of method are you describing? Abbreviations should not be used in the title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1983 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are handled without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Stein, S., and Udenfriend, S. (1984) *Anal. Biochem.* **136**, 7-23.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
